JOURNAL OF CRYSTAL GROWTH

Subject index

Aluminum
– nitride 65
Ammonium
– chloride 59
Anhydrite 519
Apparatus
– for solution growth
– – by electrocrystallization
– – – of silver 229
– – by low temperature method
– – – using extremely low frequency electric field
– – – – of apatites 27
– – – – of calcite 27
– for thin film growth
– – by liquid phase epitaxy
– – – using vibrational stirring
– – – – of GaAs 378
– – by vapor phase epitaxy
– – – through metalorganic chemical vapor deposition
– – – – of silicon carbide 533
– – – – of III–V compounds 320
– for miscellaneous purposes
– – – of III–V compounds 320
– for miscellaneous purposes
– – determining surface tension 576
– – determining viscosity 576
– – measuring contact angle 270
– – pulsed molecular beam valve 553

Barium
– borate 270
Bismuth
– strontium calcium cuprate 17, 653
Boundary layer control
– in ideal Bridgman configuration 112
– in growth of 2D crystals 289
– of iron in indium phosphide 449

Cadmium
– mercury telluride 477
– organic 477
– sulphide 384
Calcite 27
Calcium
– apatite 1, 27
– carbonate 27
– fluoride 591
– oxalate 215
– phosphate 251
– sulphate 519

Caprolactam 363
Characterization methods
– by absorption spectroscopy 215
– by determination of vapor pressure 644
– by electrical methods 336, 373, 465, 548, 653
– by electroluminescence 373
– by electron diffraction 164
– by electron microscopy 1, 7, 17, 42, 51, 97, 121, 164, 208, 215, 237, 251, 270, 281, 301, 336, 347, 420, 431, 440, 457, 465, 502, 543, 597, 649
– by electron probe microanalysis 431
– by emission 81
– by infrared transmission 81
– by interferometry 208, 229, 237, 320
– by magnetic properties 17, 653
– by neutron diffraction 33
– by nuclear magnetic resonance 81
– by optical microscopy 51, 175, 237, 270, 281, 301, 375, 378, 381, 425, 440, 465, 533
– by particle size distribution analysis 425
– by photoluminescence 301, 336, 548
– by Raman spectroscopy 649
– by reflectance 384, 553
– by secondary ion mass spectrometry 449
– by thermal analysis 121, 568
– by thermal stress analysis 102
– by thermophysical properties 69
– by transmission spectroscopy 420
– by X-ray methods 17, 81, 97, 121, 208, 223, 237, 281, 329, 336, 381, 420, 440, 465, 533, 548, 649, 653
Computer simulation
– of Czochralski silicon 181
– of growth in MOCVD reactor 612
Convection 112, 135, 149, 175, 311, 378, 404, 415, 487
Copper
– gallium diselenide 381
– indium selenide 548

Dendritic growth
– of ammonium chloride 59
– of ice 487, 495
– of silver 97
Device characterization
– diodes 373
– double heterostructures 465, 502
– lasers 465
Diamond 42, 51, 375, 649
Diffusional control
– of ideal Bridgman configuration 112

– of indium gallium arsenide system 127
– of model growth under microgravity 135
– of simulated floating zone 149
– of zinc in indium gallium arsenide phosphide 465
Diodes, see Device characterization

Electro-optics 568
Epitaxy, see Thin film growth
Etching
– chemical 237, 301, 347
– reactive ion 347
Eutectic growth
– of chimney CVD reactor 311
– of floating zone 149
– of lead chloride/silver chloride 583
– of silicon 102
Finite element model
– for gallium arsenide 69

Gallium
– arsenide 69, 329, 347, 378, 440, 457, 612
– indium arsenide 347
– indium phosphide 347
– organic 440, 457, 502, 612
Germanium 553
Gold 543

Ice 33, 495
Indium
– gallium arsenide 127, 281, 502
– gallium arsenide phosphide 465, 509
– gallium phosphide 336
– organic 502, 597
– phosphide 347, 449, 597
Iridium 543

Kinetics
– of dissolution 251, 591
– of growth 27, 51, 65, 127, 164, 175, 215, 223, 229, 291, 347, 363, 378, 389, 425, 440, 449, 457, 465, 502, 533, 597, 627
– of interface control 378, 389
– of nucleation 215, 583

Lasers, see Device characterization
Lead
– chloride/silver chloride eutectic 583
Lithium
– borate 270
– niobate 175

Magnesium
– phosphates 121
Mathematical model
– for prediction of solid fraction within mushy layer 487
– for transport phenomena in MOCVD reactor 612
Melt growth technique
– by Bridgman–Stockbarger method
– – of borates 270
– – of gallium arsenide 69
– – of thallium arsenide selenide 208
– – of tin 404, 415
– – numerical model of 69, 112
– by Czochralski method
– – of lithium niobate 175
– – of silicon 102, 181
– – simulation of 181
– by floating zone method
– – of copper gallium diselenide 381
– – of rutile 571
– – theory of 149
– by traveling heater method
– – of copper indium selenide 548
– by zone melting
– – of II–VI compounds 576
Mercury
– cadmium telluride 477
– (II) iodide 627, 644
Microgravity, growth under
– of diamond 51
– of ideal Bridgman configuration 112
– of lead chloride/silver chloride eutectic 583
– modeling of 135, 149
Morphological stability
– of 2D crystals 389
Morphology of growth
– in different solvents 363
– in 2D crystals 389

Nonlinear optics, crystals for
– rubidium titanyl phosphate 639
– thallium arsenide selenide 208
Numbers
– Biot 149
– Grashof 112, 175, 311, 612
– Peclet 112
– Prandtl 404
– Rayleigh 415, 612
– Reynolds 149, 175, 612
– Schmidt 112, 404
– Stefan 149

Periodic bond chain theory
– of diamond 42, 649
– of organic crystal 363
Phase diagrams
– of indium gallium arsenide system 127
– of indium gallium arsenide phosphide 509
– of lead chloride/silver chloride eutectic 583
– of rubidium titanyl phosphate 639
Phenomenological theory
– of silicon germanium growth 291
– of 2D growth 389
Potassium
– tantalate niobate 568
Pyranine 81

Quartz 237

Rubidium
– titanyl phosphate 639

Silicon 164, 181, 543
– carbide 533
– germanium 291, 301
– organic 533
Silver 97, 229
Solid growth technique
– by direct reaction
– – of zircon 223
Solution growth technique
– by electrocrystallization
– – of silver 229
– by flux method
– – of bismuth strontium calcium cuprate 17, 653
– – of diamond 51
– – of potassium tantalate niobate 568
– – of rubidium titanyl phosphate 639
– – of zircons 431
– by hydrothermal growth
– – of diamond 375
– – of quartz 237
– by low temperature method
– – of ammonium chloride 59
– – of apatites 1, 27
– – of calcite 27
– – of calcium fluoride 591
– – of calcium oxalate 215
– – of calcium phosphate 251
– – of ice 495
– – of magnesium phosphates 121
– – of organic crystal 363
– theory of 135
Stefan problem or moving boundary problem
– of dendritic crystals 487
– of simulated growth by floating zone 149
– of 2D crystal growth 389
Strontium
– copper oxide, bismuth-doped 17
Superconductivity materials, high T_c
– bulk
– – of BSCCO 17
– film
– – of BSCCO 653
Supercooling, supersaturation 81, 389
Surface energy, determination
– of anhydrite 519
– of silver 229
– of II–VI compounds 576
Surface structure
– in ultra-high vacuum 543

Tellurium 7
Thallium
– arsenide selenide 208
Thermodynamics
– of lead chloride/silver chloride eutectic 583
– of mercury cadmium telluride 477
– of quaternary III–V compounds 509
Thin film growth, epitaxy
– by chemical beam epitaxy
– – of indium gallium arsenide 502
– by hot wall epitaxy
– – of cadmium sulphide 384
– by liquid phase epitaxy
– – of bismuth strontium calcium cuprate 653
– – of gallium arsenide 378
– – of indium gallium arsenide 127
– – of indium gallium arsenide phosphide 465
– by molecular beam epitaxy
– – of indium gallium arsenide 281
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of gallium arsenide 457
– – – of germanium 553
– – – of silicon 164
– – – of silicon germanium 291, 301
– – – theory of 164, 311
– – through evaporation and condensation
– – – of tellurium 7
– – – of zinc selenide 373
– – through metalorganic chemical vapor deposition
– – – of diamond 42, 649
– – – of gallium arsenide 329, 347, 440, 612
– – – of gallium indium arsenide 347
– – – of gallium indium phosphide 347
– – – of indium gallium phosphide 336
– – – of indium phosphide 347, 449, 597
– – – of mercury cadmium telluride 477
– – – of silicon carbide 533
– – – of III–V compounds 320
– – – of zinc selenide 420
Tin 404, 415
Two–six (II–VI) compounds 576

Vapor growth technique
– by chemical transport
– – of zinc sulphide 425
– by evaporation and condensation
– – of aluminum nitride 65
– – of mercury(II) iodide 627
– – theory of 65, 627

Zinc
– organic 420
– selenide 373, 420
– sulphide 425
Zirconium
– silicate 223, 431
Zircons
– doped 431
